End-of-Day Survey

Permit Holder:	Building:	Room(s):

All personnel working with radioactive material must perform an end-of-day survey that is appropriate for the radioisotopes(s) in question* before leaving the laboratory. Document the results of the surveys performed on this form.

*For example, survey all working surfaces and equipment with a Ludlum Model 3 Gieger counter for experiments involving P-32 or P-33. Use a low energy gamma probe (LEG) for the experiments involving I-125. Perform wipe tests for experiments involving S-35, C-14 and H-3.

Date	Name	Isotope(s)	Contamination found (Y/N)	Contamination Results (DPM or mR/hr)	Equipment Used
