SAFETY MANAGEMENT

Occupational Injury & Illness Prevention (OIIP) Tips—Be Aware & Care

- **If you see something, say something.** Immediately report unsafe conditions to your supervisor, EH&S (4-6783), or University Police (911).
- **Be careful and alert** to your surroundings. If you see a wet floor, please take immediate action to remedy, or call appropriate personnel.
- **Follow applicable work procedures and policies.** If you are unfamiliar with a specific procedure, request training.
- Prior to using a new product, review the **Safety Data Sheet (SDS), and product label.** SDS are located on Hospital Intranet under “Resources”.
- **Use lifting equipment** or ask for assistance when handling patients, heavy supplies or equipment.
- **Wear personal protective equipment (PPE)** such as gloves, goggles, gown or N95 respirator, as required.
- **Avoid rushing** as you or others may be injured.
- **Secure loose wires** to minimize tripping hazards.
- **See Admin EC:0046, Occupational Injury and Illness Prevention (OIIP)** for more information.

Employee Injury/Illness Notification Procedures

⇒ Notify your supervisor or designee.
⇒ If medical attention is needed, report to Employee Health & Wellness. If life threatening injury or off-hours, go to the ED.
⇒ Ensure Employee Injury/Illness Report is completed within 24 hours and immediately fax to 706-4230 (Hospital staff) or 632-2417 (Research Foundation). Employee, supervisor, witness and medical provider must complete their sections. Retain original injury report; Supervisor keeps a copy. Also complete a Sharps Injury Log if the injury involves a needlestick or other sharp. Both forms are available on the intranet in the “Resources” section, under “Forms”.
⇒ Call the NYS Accident Reporting System (ARS) at 888-800-0029.
⇒ Ensure medical provider accepts Workers’ Compensation prior to an office visit and inform the provider that the injury is work-related. Employee must notify their supervisor of any time off due to injury/illness AND provide medical documentation from their private physician to Timekeeping. **Reference: Admin HR:0016, Employee Occupational Injury/Illness Reporting**

**Important Contacts:**

<table>
<thead>
<tr>
<th>Timekeeping: 4-4377</th>
<th>Environmental Health &amp; Safety: 4-6783</th>

Respirator Information

**Monthly Respirator Fit Testing:**
EH&S’ schedule for monthly training and fit testing is posted on:
- Hospital’s weekly announcements, Intranet under “Hot Topics” and EH&S website
- Call EH&S at 4-6783 to RSVP.
- Training & Fit Testing is required annually for those in Respiratory Protection Program

**Order N95 Respirators through Lawson:**
- 3M 1860S (small): Lawson #24815
- 3M 1860 (regular): #21723
- Moldex 1510 (XS): #51154
- Moldex 1511 (S): #26414
- Moldex 1512 (M): #26416
- Moldex 1513 (L): #26415
⇒ Only wear the respirator make/model/size you were fitted with.
**Reference: Admin EC:0038, Respiratory Protection Program**
Hazard Communication Standard Labels

OSHA has updated the requirements for labeling of hazardous chemicals under its Hazard Communication Standard (HCS). As of June 1, 2015, all labels will be required to have pictograms, a signal word, hazard and precautionary statements, the product identifier, and supplier identification. A sample revised HCS label, identifying the required label elements, is shown on the right. Supplemental information can also be provided on the label as needed.

For more information:

U.S. Department of Labor | www.osha.gov (800) 321 OSHA (6742)
### Hazard Communication Safety Data Sheets

The Hazard Communication Standard (HCS) requires chemical manufacturers, distributors, or importers to provide Safety Data Sheets (SDSs) (formerly known as Material Safety Data Sheets or MSDSs) to communicate the hazards of hazardous chemical products. As of June 1, 2015, the HCS will require new SDSs to be in a uniform format, and include the section numbers, the headings, and associated information under the headings below:

**Section 1, Identification** includes product identifier; manufacturer or distributor name, address, phone number; emergency phone number; recommended use; restrictions on use.

**Section 2, Hazard(s) identification** includes all hazards regarding the chemical; required label elements.

**Section 3, Composition/information on ingredients** includes information on chemical ingredients; trade secret claims.

**Section 4, First-aid measures** includes important symptoms/effects, acute and chronic effects; numerical measures of toxicity.

**Section 5, Fire-fighting measures** lists suitable extinguishing techniques, equipment; chemical hazards from fire.

**Section 6, Accidental release measures** lists emergency procedures; protective equipment; proper methods of containment and cleanup.

**Section 7, Handling and storage** lists precautions for safe handling and storage, including incompatibilities.

*(Continued on other side)*

---

### Hazard Communication Safety Data Sheets

**Section 8, Exposure controls/personal protection** lists OSHA’s Permissible Exposure Limits (PELs); Threshold Limit Values (TLVs); appropriate engineering controls; personal protective equipment (PPE).

**Section 9, Physical and chemical properties** lists the chemical’s characteristics.

**Section 10, Stability and reactivity** lists chemical stability and possibility of hazardous reactions.

**Section 11, Toxicological information** includes routes of exposure; related symptoms, acute and chronic effects; numerical measures of toxicity.

**Section 12, Ecological information**

**Section 13, Disposal considerations**

**Section 14, Transport information**

**Section 15, Regulatory information**

**Section 16, Other information**, includes the date of preparation or last revision.

*Note: Since other Agencies regulate this information, OSHA will not be enforcing Sections 12 through 15 (29 CFR 1910.1200(g)(2)).

Employers must ensure that SDSs are readily accessible to employees.

---

### Hazard Communication Standard Pictogram

As of June 1, 2015, the Hazard Communication Standard (HCS) will require pictograms on labels to alert users of the chemical hazards to which they may be exposed. Each pictogram consists of a symbol on a white background framed within a red border and represents a distinct hazard(s). The pictogram on the label is determined by the chemical hazard classification.

**HCS Pictograms and Hazards**

The Hospital Fire Safety group is responsible for the fire and life safety environment of care for the Hospital, Pavilion, Cancer Center, Ambulatory Care Pavilion, and Ambulatory Surgery Center. The Fire Safety Program at the hospital is designed as a prevention program, and should that fail, ensures the facility and staff is capable of dealing with any fire condition. Safe building design and maintenance of protective features is the first step in protecting building occupants. Our goal is the quick detection of potential hazards including those that could result in fire or smoke conditions as well as those that would prevent containment of fire or smoke or impede response or evacuation. The objective of the fire safety training and education program is to prevent risks through recognition, detection and correction of potential hazards.

SERVICES AND PRODUCTS OFFERED BY THE FIRE SAFETY GROUP:

Fire Warden Training: A key element of the hospital’s fire safety plan is fire wardens that coordinate evacuations in the event of a fire. Each area is required to have enough fire wardens for each shift to ensure at least one fire warden on duty. Training is provided by our fire marshals.

Fire Extinguisher Training: Small, incipient fires can usually be readily extinguished by staff with fire extinguishers that are located throughout the facility. Knowing not only the locations of extinguishers, but also how to use them is vitally important. The fire marshals have a burn simulator that supervisors can arrange to have their employees trained on, giving valuable hands-on live extinguisher training.

Site-Specific Fire Safety Training: Right to Know training contains general fire safety information. Knowing specific actions to take for fires in your unit can include a more in-depth understanding of your areas fire zone layout and other fire protection features. These site-specific fire safety classes can be provided on an as-needed basis.

Fire Evacuation Plans: Hand-in-hand with site specific fire evacuation, is having fire evacuation plan drawing for each unit. Since the majority of the hospital’s population will not evacuate to the outside, knowing where the evacuation zones, or adjacent areas of refuge are located is important. These drawings are posted in each unit and will indicate the fire barriers and areas of refuge to move patients while the fire is being extinguished. It is the responsibility of staff to be knowledgeable of the plans content.

EMERGENCY PHONE NUMBERS:

Fire/Smoke (Hospital/Cancer Center/Pavilion): Call 911
Fire/Smoke (ASC/ACP): Call 911
For a Code Red incident (Fire and/or visible smoke): Call 911 and activate fire alarm by pulling manual station

If you have any Fire Safety questions, contact EH&S at 4-6783.

Providing and maintaining a safe and secure hospital environment is the work of the University Police Department and Public Safety Staff.

The University Police Department offers many services to Stony Brook University Hospital through the presence of Police Officers and the Public Safety Staff in and around the Hospital and Health Science Center. The Public Safety Office can be reached at 4-2825 on-campus or 444-2825 off-campus.

In the Event of an Emergency, Dial 911 from any Hospital or Campus phone. If you are using a non-campus phone or need to reach University Police from off-campus, dial (631) 632-3333.

Services offered include:

1. Access control of patients, visitors, guests and vendors.
2. Assist staff with handling unruly or disruptive individuals.
3. Crime Prevention
4. Escort to and from the parking lots (Call University Police at 911.)
5. Foot and motor patrol of the campus
6. Identify, report and follow-up on potential safety and security hazards.
7. Lost and Found
8. New staff orientation
9. Police response to criminal activity and investigation
10. Respond to incidents.

As a Member of our Community, Help Create a Safe and Secure Environment:

1. Display your University ID, above your waist, at all times while within Stony Brook University Hospital or Health Science Center.
2. Report unauthorized visitors and guests to University Police (911).
3. Report any security issues or potential hazards to Public Safety staff immediately through University Police (911).
4. Secure all valuables when leaving your office or work area.
5. Comply with directives given by University Police Officers, Public Safety and Hospital Administration.

“Service is our Business”
**Biomedical Engineering Department** (BME) is responsible for the maintenance and management of diagnostic and therapeutic equipment used in the care of patients at Stony Brook University Hospital.

**HOURS** – Biomedical Engineering is staffed Monday through Friday, excluding SUNY Holidays. Technicians are on call 24 hours/day for emergencies (ADN calls Operator to page Hospital or O.R. BME Technician).

**PHONE** – 4-1420 or 4-HELP

**LOCATION** – HSC Level 1-141

BME performs Preventive Maintenance/Safety Checks (PMs) and inspections as required by each piece of medical equipment in the BME program as evidenced by a BME Inspection tag. You can check if preventative maintenance is due by checking the date on the BME Inspection tag. The date on the tag will represent the date equipment is due for inspection and the inspection interval (e.g. Annual).

**HOW TO GET SERVICE:**

- Go to the BME Service Request link using the procedure on the next page.
- Find the BME tag on the piece of equipment you are having trouble with and enter that number and a brief description of the problem onto the online request form.
- Put broken equipment aside with printout of service request taped to the device so no one will use it.

**WHAT TO DO IN CASE OF MEDICAL EQUIPMENT EMERGENCY:**

- **DAYS** – call BME at 4-1420 or 4-HELP.
- **OFF Hours** – contact the ADN to have operator page the Hospital or O.R. BME Technician on call.
- **INCIDENT REPORTING** – For any SB Safe event, record the BME # of equipment that could possibly have been involved in the patient/equipment incident. *All equipment and disposables involved in the SB Safe event must be clearly labeled and sequestered for BME investigation.*
- **LOSS OF POWER** – Use only the red emergency outlets for emergency power.

**WHAT TO LOOK OUT FOR:**

- **UNREGISTERED EQUIPMENT** – All electrical medical equipment in the BME program should have a BME tag or a rental company tag. Our BME tag is evidence that the equipment has received an incoming inspection by BME. If you find a device without a BME tag, report this to BME by calling 4-1420 or 4-HELP. *All new medical equipment purchases made by a department other than BME must have a BME Checklist completed and submitted to Purchasing as part of the procurement package.*
- **UNREPORTED BROKEN EQUIPMENT** – Contact BME for service using the service request link on the intranet or call 4-1420 during regular business hours.
Procedure for entering a BME Service Request:

- Go to the Stony Brook Medicine Home Page.
- Under “My Requests”, Click on “BME Service Request”.
- Enter all the required information and click on “Save”.
- Click “Send to Printer” to get a copy of the work order.
- Tape the printed request on the device that requires service.

Radiation producing machines and radiation emitting sources are used at Stony Brook Medicine facilities for the diagnosis and treatment of diseases. Staff working in radiology, nuclear medicine, radiation oncology, and some laboratories must be specifically trained in the operation of radiation machines and the handling of radioactive materials and sources. Housekeepers, maintenance and other ancillary staff could have indirect contact and may be potentially exposed to radiation during performance of their normal duties. In addition, patient transport, operating room, and recovery room personnel may come in contact with radiiodine, brachytherapy (radioactive implant) and nuclear medicine patients.

Radiation Protection Services (RPS) establishes uniform policies and procedures for the safe use of ionizing radiation within the University, ensuring that operations conform with Federal, State and University regulations. RPS provides services to medical operations and staff to ensure that radiation exposure is maintained As Low As Reasonably Achievable (ALARA).

Services and products offered by RPS
- Inventorying, inspecting and surveying areas controlled for radiation safety
- Providing staff and patients routine and special, tailored radiation safety training
- Administering the Personnel Monitoring Program (radiation badges)
- Supporting radiation safety for all uses of radiation in diagnosis and therapy
- Providing radiation survey instrument calibration service
- Administering the lead apron inspection program
- Emergency / radioactive spill response
- Managing of Low Level Radioactive Waste
- Providing non-ionizing radiation safety (RF, EMF & ELF) support

Radiation Safety Tips
- Be aware of radiation safety signage and do not enter posted areas without authorization from area manager/supervisor or RPS.
- Working in a radiological controlled area requires radiation safety training. Call RPS for training.
- Know how to keep your radiation exposure As Low As Reasonably Achievable (ALARA) using time, distance and shielding.
- Maintain security and control of all radioactive substances and sources in your work area.
- If issued dosimetry to measure your occupational radiation dose, wear badges and rings properly on the body as designated while working with radiation. Return badges to your department badge coordinator promptly at the end of the wear cycle (9th of the month).
- If wearing lead aprons/shields as PPE, before use inspect for damage and annual RPS inspection.
- If a radioactive spill occurs follow emergency procedures posted in your area and call RPS.

UH RPS Contacts:
- Associate Radiation Safety Officer - University Hospital

COMPREHENSIVE PLAN ADDRESSES MANY POTENTIAL EVENTS

- Emergency Management Policies and Procedures Manual is on every clinical unit and in every department.
- Staff must know where their unit’s Manual and power outage emergency kit (containing flashlights, batteries, glow sticks, extension cord and duct tape) are located. To replenish kits, call 4-2400.

MANUAL TOPICS

- Command Post Policy
- External Disaster Policy
- Bomb Threat Policy
- Bioterrorism Policy
- Radiation/Hazmat Decontamination Policy
- Physical Plant Failure Plan
- Communication Failure Plan
- Weather Emergency Plan
- Medical Monitoring Equipment Failure Plan
- Fire & Evacuation Plan

DEPARTMENTAL PLANS

Every department must have a department specific emergency preparedness plan

- How would this department respond to an “event”?
- How would this department call in additional resources, i.e. personnel and equipment?
- How would this department allocate additional inpatient beds as needed?

HOSPITAL INCIDENT COMMAND SYSTEM

- Identifies the specific chain of command
- Identifies responsibilities for all individuals
- Provides for a rapid and effective means of communication and notification
- Preplanned comprehensive system to allow rapid mobilization of required resources

ACTIVATION OF PLAN

- Any employee who learns that a large number of disaster victims may be received in the Emergency Department should immediately notify their administrative supervisor who will call EMS at 4-1911.
- All employees must be aware that if the plan is activated they should speak with their supervisor to get instructions as to what their role is.

VOLUNTEERS WELCOME

CALL 4-6151 FOR INFORMATION ABOUT

- Patient Decontamination Team
- Hospital Emergency Radio Team
- Exercise Planning Teams
- Points of Distribution (POD) Teams

Employees should also have a personal household emergency plan!
Visit www.ready.gov

The emergency management manual and departmental specific plan should be referenced once the plan is activated.
Ten Critical Steps for Handling Possible Bioterrorist Events

1. **Maintain an index of suspicion.**
   - In an otherwise healthy population, some associations are very suggestive, especially when seen in clusters, high numbers, or unusual presentations.
   - **Hemoptysis** ................................................. Plague
   - **Flaccid Paralysis** ........................................ Botulism
   - **Purpura** ........................................................ Viral Hemorrhagic Fevers (VHF)
   - **Wide mediastinum** ....................................... Anthrax
   - **Centripetal (peripheral towards the center) rash** Smallpox

2. **Protect yourself and your patients.**
   - Use appropriate personal protection equipment (PPE). Prophylaxis: vaccines, if available; or antibiotics, if risks are known.

3. **Adequately assess the patient.**
   - Review and assess the patient’s history. Also, ask:
     - Are others ill?
     - Were there any unusual events?
     - Was there an uncontrolled food source or other environmental factor?
     - Was there vector exposure?
     - Has the patient been traveling?
     - What is the patient’s immunization record?
   - Perform a physical examination with special attention to the respiratory system, nervous system, skin condition, and hematologic and vascular status.

4. **Decontaminate as appropriate.**
   - Do not use bleach on exposed people. Soap, water and shampoo are perfectly adequate for all biological and most chemical agents. Chemically contaminated clothes should be removed and discarded safely. Biologically contaminated clothes can be laundered with soap, water and, perhaps, bleach.

5. **Establish a diagnosis.**
   - All lab specimens to be hand carried and appropriately labeled. **Do not use the pneumatic tube system.**
   - Think clinically and epidemiologically; always send specimens for culture.
   - **Symptom (individuals) Possible Diagnosis**
     - Pulmonary Tularemia, plague, staph enterotoxin B (SEB)
     - Neur muscular Botulism, Venezuelan equine encephalitis (VEE)
     - Bleeding/purpura VHF, ricin, plague (late)
     - Rash (various types) VHF, T2 mycotoxin, smallpox, plague
     - Flu-like symptoms Varies
   - **Immediate Symptoms (large numbers) Possible Diagnosis**
     - Pulmonary SEB, mustard, Lewisite, phosgene, cyanide
     - Neurologic nerve gases, cyanide
   - **Delayed Symptoms (large numbers) Possible Diagnosis**
     - Pulmonary Biologic agents, mustard, phosgene
     - Neurologic Botulism, VEE, other encephalitis

6. **Render prompt treatment.**
   - Doxycycline can be used to treat virtually everything (except virals or toxins) while awaiting lab results. Observe pediatric precautions as appropriate.

7. **Provide good infection control.**
   - Gown, gloves, mask and handwashing, and eyewear if necessary, are sufficient.
   - Recommended isolation precautions for biologic agents include:
     - **Standard Precautions**...........For all individuals/patients
     - **Contact Precautions**.........(herpes, etc.) Viral Hemorrhagic Fevers
     - **Droplet Precautions**.........Pneumonic Plague and Tularemia
     - **Airborne Precautions**.......Smallpox

8. **Contact Infection Control Nurse for all suspected infectious cases.**
   - **All media contact should be channeled through SBUH Media Relations.**
   - **Agency Telephone Number**
     - SBUH Healthcare Epidemiology ............ Page via the Operator
     - SBUH Emergency Medical Services .......... 444-1911
     - SBUH Environmental Health & Safety ...... 911 (via the University Police)
     - SBUH Media Relations ...................... 444-7880 or page via the Operator
     - FBI .................................................. 516-753-0130 (Long Island)
     - Suffolk County Dept. of Health ............ 631-853-3000
     - NYS Health Department ..................... 866-881-2809
     - Centers for Disease Control and Prevention --- 770-488-7100

9. **Assist in the epidemiologic investigations.**
   - Steps to be taken in an epidemiologic investigation so as to determine who may be at risk.
     - Count cases; Relate to the at-risk population; Make comparisons; Develop hypotheses; Test hypotheses; Make inferences; Conduct studies; Interpret and evaluate.

10. **Know and spread this information.**
    - Adapted from a poster distributed by the **NYS Department of Health** Bureau of Communicable Disease Control from a lecture by Dr. Ted Cieslak, Colonel, US Army
## CHEMICAL SPILL RESPONSE PROCEDURES

REMEmBER: FIRST AID FIRST, THEN ASSESS THE SPILL - Is the Spill Major or Minor?

### Minor Spill Response

1. Notify coworkers and evacuate necessary persons to a safe area.
2. Secure area by restricting access and posting signs.
3. Remove any potential ignition sources and unplug nearby electrical equipment, if feasible.
4. Review safety information on spilled chemical, including the Safety Data Sheet (SDS) and product label.
5. Locate appropriate spill kit and review spill kit instructions.
6. Don personal protective equipment (PPE) which typically includes chemical splash goggles, chemical resistant gloves, apron or lab coat. If splash potential exists, additional PPE such as a face shield or booties may be necessary.
7. Confine and contain spill. Cover spill with appropriate absorbent material.
8. Clean up spill using a scoop or other suitable item and place material in appropriate disposal container.
9. Decontaminate spill surface with hospital approved disinfectant (HAD), as appropriate. _Note: for Hazardous Drug spill use HD Clean wipes instead of HAD._
10. Carefully remove PPE, place non-reusable items in disposal container and thoroughly wash hands. Contact EH&S at 4-6783 for proper waste disposal.
12. Replenish spill kit. Glutaraldehyde/OPA spill kit (Lawson # 41899), chemotherapy drug spill kit (Lawson # 60434) and Spill-X-FP for formalin spill kits (Lawson # 41858) are available through the Lawson system. Acid spill kits are available through EH&S.

### Major Spill Response

1. Notify coworkers and have area evacuated.
2. Secure area by restricting access and posting signs.
3. If possible, trained staff can use a spill kit/absorbent material to initially contain the spill prior to evacuation. Do not attempt to clean up a major spill.
4. Contact University Police at 911 (cell: 631-632-3333) and give details of spill including specific location, chemical, quantity, and if anyone is injured.
5. In case of an injury or chemical contamination:
   a. Wear PPE and move victim from spill area.
   b. Remove any contaminated clothing and place in a plastic bag for laundering or disposal.
   c. Locate nearest emergency safety shower or eyewash. Flush affected areas using eyewash or emergency shower, if available, with copious amounts of water for 15 minutes.
   d. If first aid trained, administer first aid as appropriate. Assist person to Employee Health & Wellness or Emergency Department (after hours) for treatment. If possible, bring SDS or product label.
7. Staff knowledgeable about the spill provides responders with all pertinent information and SDS.
8. The responders or designee informs staff when it is safe to re-enter spill area.

Revised 7/31/17
Radiological Incident Response

A. EXTREME HAZARDS: High radiation levels or the possibility of airborne contamination from dry or volatile radioactive materials
   - Evacuate the area immediately. Close and lock the doors, or stand guard.
   - Call University Police at 911 (cell phone: 631-632-3333) and have them contact the assigned staff from Radiation Protection Services (RPS).
   - If you have to leave the area, remove your shoes if you suspect contamination and do not touch anything if possible.

B. NON-EXTREME HAZARDS: Spills or suspected spills of radioactive materials where material does not become airborne

   1) Confine Contamination
      a. Localize the spill by placing absorbent material (i.e., chux or pad) on a liquid spill.
      b. Close door.
      c. Where possible, have ventilation adjusted to prevent spread of airborne contamination by contacting Plant Operations at 4-2400.
      d. Do not track contamination around the area. Check shoes with survey meter. Do not leave the spill area without surveying hands and feet.

   2) Protect Personnel
      a. Alert other staff and nearby persons of the hazard.
      b. Remove contaminated clothing and wash contaminated parts of the body with soap and warm water (be especially thorough in flushing out wounds).
      c. If thorough washing with soap does not remove contamination from the body, call RPS at 631-632-6410 during normal business hours or 911 off hours.

   3) Decontaminate
      a. Trained staff will be expected to perform the major work of decontamination of their area. If assistance is needed, contact RPS at 631-632-6410 during normal business hours or 911 off hours.
      b. All potentially contaminated persons and areas must be monitored after decontamination by trained personnel before normal work is resumed.
      c. Always contact RPS at 631-632-6410 within 24 hours after an incident.

Biological Spill Response

Staff wear nitrile gloves when cleaning up spills of blood or other potentially infectious materials (i.e., body fluids, unfixed tissue). If there is splash or splatter potential, eye/face protection and/or gown/lab coat is worn. The spill response is as follows:

1. Patient care areas:
   a. Clinical staff in affected area removes visible bulk biological material i.e., vomit, feces, urine) using a chux and discard in regular trash. However, if biological waste material is blood, it must be disposed in a red bag.
   b. The remainder of the spill is cleaned by Hospital Custodial Services staff using the hospital approved disinfectant (HAD).
   c. The used microfiber mop head is removed and placed in a plastic liner for laundering.

2. Non-patient care areas/Laboratories: Affected area staff covers the spill with absorbent material to contain spill and Hospital Custodial Services staff performs spill cleanup using the HAD, excluding lab equipment. Laboratory staff is responsible for decontaminating any affected lab equipment using the HAD.

| Gas Cylinders           | Pick-up of empty or extra oxygen tanks:  
                          - M-F 8AM-4:30PM, call 5-8915 or 4-5498 (Receiving)  
                          - M-F 4:30PM-8AM & weekends, call 4-2980 (Distribution Services) |
| Linen Carts             | Call 4-1462 if the cart is no longer needed on the unit |
| Physical Therapy (PT) Stairs | Any concerns or inappropriate placement of stairs, call PT at 4-2620 |
| Pumps                   | Request a pick-up through Capacity Management or call 4-2980 |
| RIC/Patient Management Carts | For repair or adjustments, contact 4-HELP |
| Skids                   | Call 4-5498 Monday thru Friday for pick-up |
| Wheelchairs             | Request a pick-up through Capacity Management or call 4-2980 |
1) **Dietary Carts No Longer Fly Solo**: The Food Service Ambassador for each floor coordinates dietary cart pick-up with the Food Service elevator operator. The Ambassador contacts the operator and waits with the dirty cart being returned. Additionally, the elevator operator rounds on all floors checking the elevator lobbies continuously and additional assistance from supplemental Food Service staff checking the floors. For hot food deliveries, the Ambassador receives a phone call that the hot food is on its way up and they meet the elevator operator to reduce hallway time.

2) **Physical Therapy Stairs Find a Parking Space on the Units:**
   - On MRN - stairs stored near the entrance to EEG
   - On Level 5 near CACU - stairs stored in the area by the door to the mechanical room
   - On 12S - stairs stored in the lounge
   - On 8N, 9N, 15N, 15S, 16S and 18N - stairs stored in the alcoves
   - If the stairs are moved from their storage space in the alcove for a patient, an alternative storage space is utilized.

3) **No Skid Left Behind**: When deliveries are made that require skids to be left behind, staff return to pick them up. Deliveries using skids are not made unless absolutely necessary. Call 4-5498 Monday thru Friday for pickup.

4) **Team Approach Puts Linen in its Place**: Small Rubbermaid carts are replacing the large metal racks. The large racks will be removed from service and the smaller carts will be used to distribute par levels for each room. The small carts are not to be stored in hallways.

5) **Recycling is a “Good Thing”**: We need your broken items so please don’t abandon in the hallway. Pick-up the phone and make the call to the Recycling Department at 4-1462. Recycling takes broken hampers, HIPAA bins, unwanted or broken furniture, chairs and file cabinets.

6) **Clear the Deck**: Administrators, Managers and Directors located on Level 1 rotate responsibility weekly to ensure clear egress through coordination of efforts and rounding. This process focuses on eliminating excessive boxes, skids and other stored items from blocking hallways on Level 1 and the loading dock.

7) **Reducing the Hallway Patient “Carbon Footprint”**: Designated hallway areas are set-up when the unit receives notification of a hallway patient being received to the unit. Once the patient is removed from the hallway location, all the equipment including the privacy curtains, chairs and other medical equipment are removed immediately.
